

BIN STOCK

INVENTORY MANAGEMENT SOLUTIONS

The Right Inventory. Exactly How You Need It.

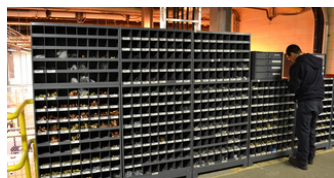

Supplier-Managed Replenishment that keeps critical inventory on hand while reducing the effort required to manage it.

Our Bin Stock program is our base solution program that keeps essential parts and materials organized, visible, and automatically replenished to prevent stock-outs and improve operational efficiency, maintaining the right amount of product at the right location, ensuring continuous availability while minimizing excess inventory and associated costs.

Our BIN Stock program also allows for a wide range of options for how much you want us involved. You can start with a simple solution where we organize your assets and get trained and set up and then from there you can add on additional services and analytics insights. How much you want us involved after initial set up is up to you!

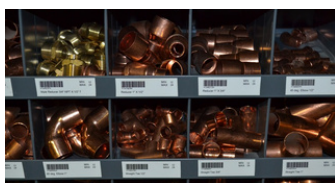

Features

- Inventory organization
- Asset analysis
- Inventory usage tracking
- Scheduled inventory replenishment
- Visual inventory monitoring
- Min/Max level management

Add-ons

- Mobile inventory applications
- Digital dashboards
- Automated replenishment alerts
- Electronic Kanban systems
- Cloud-based inventory visibility
- Source Atlantic auto replenishment

Analytics

Leveraging advanced design tools and analytics to deliver strategies that reduce costs and track key metrics, including project cost per labor hour. We can make recommendations for advanced analytics to help you identify cost savings by giving you visibility into extended details about your consumption. Reports can provide complete usage history by location or by project.
