

POINT OF USE

INVENTORY MANAGEMENT SOLUTIONS

Scan It. Track It. Control It.

Digitally captures inventory consumption to improve replenishment, visibility, and cost management.

Point of Use (POU) solutions place essential inventory closer to employees, supporting faster workflows and smoother operations.

The POU is a computer station set up as an integrated inventory management system: this allows employees to receive and issue goods while tracking real-time stocking levels and transactions. When stock levels reach a minimum, reordering of products is automatically sent back to us for replenishment!

Customers can customize their POU solution set up, choosing the types of scanners and analytics that suit their needs best.

Features

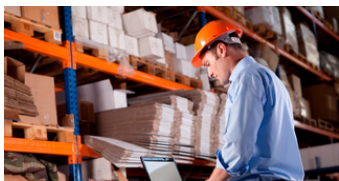

- Point-of-use product placement
- Workstation inventory setup
- Bin and cabinet organization
- Product labeling and identification
- Min/Max inventory management
- Standardized storage locations
- Visual inventory controls

Add-ons

- Mobile inventory management app
