Arc Welding

Processes

Shielded Metal Arc (Stick, Covered Electrode) Welding

In this first practical arc welding process, the arc is established between a wire rod and the work. The rod is coated with materials which generate a gas and form a slag to protect the weld puddle and the solidifying weld metal from the atmosphere. The coating may also supply alloying and refining ingredients, and the slag may help shape the weld bead, especially in vertical and overhead applications.

Electrodes are available for welding most carbon, low alloy and stainless steels, some non-ferrous metals, and a wide range of maintenance and repair applications.

Light-duty work is often done with AC power from low cost transformers; production work usually involves DC power from heavy-duty rectifiers.

Gas Metal Arc (Mig) Welding

This most flexible metal joining process involves an arc established between the work piece and a wire electrode which is continuously fed by a wire feeder through a torch. The arc continuously melts the electrode to form the weld puddle. An appropriate gas or gas mixture shields the weld area from atmospheric contamination.

The Mig process has the advantages of high deposition rates, speed, excellent weld quality, minimal distortion of the work piece and no stub loss.

Mig welding includes several distinct process variations. Selection depends largely on the work piece thickness and welding position.

Short Circuiting ("Short Arc," "Dip Transfer") Involves a small fast-freezing weld puddle. Metal is transferred from the electrode to the puddle by repeated short circuits. Small diameter wires are used and the process operates at low currents and voltages. "Short arc" is used for welding thin gauge metals in all positions and for vertical and overhead welding of heavier sections.

Spray Arc - Electrode metal is transferred to the weld puddle as discrete droplets. Deposition rate is high and there is little or no spatter. With solid wire, the technique is used for 1/8 in. (3.2 mm) and thicker work pieces and for downhand welding.

Pulsed Spray Arc - The welding current is varied rapidly between a high and a low value. Metal is transferred to the work only during the high current period. The high peak current provides excellent arc stability. The period of low current maintains the arc and reduces the average current, making it possible to weld thinner gauge materials and to weld in all positions using larger sized wire electrodes than otherwise possible.

Cored Wire - The electrode is fabricated from strip, enclosing a core of flux and metal which protects and refines the weld puddle and controls bead shape. Some cored wires can be used without external shielding gas. Smaller diameter wires can be used for all position welding. The addition of fluxing, alloy and slag-forming materials often allows high deposition rates, higher welding speeds and improved all-position capability compared with solid wires. This makes cored wire the material of choice in many high-production applications.

Arc Welding Processes

Gas Tungsten Arc (Heliarc, Tig) Welding

Introduced by ESAB, Tig welding produces welding heat from an arc between a non-consumable tungsten electrode and the work. An inert gas, usually argon, shields the arc and the work. Filler metal, if used, is added separately. Because the process uses totally inert shielding, welds of the highest quality are produced, and almost any metal can be welded.

Equipment and Materials Selection

Equipment for these processes is described in detail in this section and materials are shown in our All Products catalog.

Additional Technical Information

ESAB Technical Service Representatives are available to answer your questions at 1.800.ESAB.123. We also recommend that you take advantage of a series of handbooks published by ESAB which provide excellent guidance on the use of the arc welding processes. In addition, there are references from other sources which can be very helpful in achieving the best possible results.

Designates equipment with constant current and constant voltage output

Important Product Safety-

Sound common-sense procedures must be followed for personal protection and operating efficiency when using Arc welding equipment. Always comply with the manufacturer's recommendations for operating and maintaining the equipment, as set forth in the instructions provided with each unit. Also, be certain to use all applicable safety precautions, as described in Precaution and Safe Practices for Arc Welding, Cutting and Gouging, Form F-52-529, which is available from your local ESAB welding products distributor.

Caddy® Mig C200i

Compact

1Phase DC CV

100%
YEAR
WARRANTY

Compacts

- Can weld mild steel, aluminum, stainless steel as well as MIG/MAG brazing
- QSet - automatically selects correct parameters for required wire/gas combination
- Its light weight and portability make it easy to get to the job site, indoors or outdoors
- Has PFC (power factor correction) ensures stable welding power, even when operated from a portable generator
- Polarity change - allows you to use gasless cored wire
- Ergonomic, high quality MXL180 torch 10 ft. (3 m) long
- Optimized for .030 in. wire. Will also accept .023 in. and 0.35 in. wires as needed

The Caddy Mig C200i is an easy-to-use, intelligent and powerful machine for MIG/MAG welding mild steels, aluminum and stainless steel as well as MIG brazing. The unit is also extremely portable, making the Caddy Mig C200i an excellent choice for repair, maintenance, and assembly work – both in the workshop and while on the go.

Made from advanced materials, the Caddy Mig C200i's housing is lightweight, durable, and impact-resistant. The machine also includes a built-in cable for easy transportation. Weighing a little over 26 lbs. (12 kg), the Caddy Mig C200i is the lightest welding unit in its output class. But what really sets the Caddy Mig C200i apart is its performance. The PFC (power factor correction) feature provides 30% more welding power from the same sized fuse.

To make sure operation is a breeze, the Caddy Mig C200i is equipped with QSet™. With QSet, you only need to set the plate thickness, not only will QSet automatically set all of the welding parameters, it also automatically adjusts during the process to maintain the optimum wire/ gas combination and prevent waste of resources. If you prefer, you can make adjustments with the wire feed speed and voltage.

A single-phase input connection makes it easy to find an electrical source. And the machine performs equally as well when powered by a portable generator. The Caddy Mig C200i is an efficient inverter power source.

Inside the Caddy Mig C200i's side panel is a wire feeder that fits a wire spool with an inner diameter of 2 in. (51 mm), an external diameter of 8 in. (200 mm), and a width of 2.125 in. (55 mm).

The Caddy Mig C200i is optimized to perform for welding with .023, .030 and .035 in. solid or cored wires. We recommend the following ESAB wires when welding with the Caddy Mig C200i. Spoolarc® 86, .023, .030 and .035 in. for welding of mild steels. Coreshield 15, .030 in. for gasless welding of mild steels. ERCuSi-A .030 and .035 in. for MIG /MAG brazing. ESAB ER308LSi MIG .023, .030 and .035 in. for 18Cr 8Ni stainless steel welding. Alcotec 5183 .035 in. for aluminum welding.

Ordering information

Caddy Mig C200i, 1 ph 230V 0558101321

Ready to Weld package includes: 10 ft. (3 m) MXL 180 torch, R-33 FM580 regulator/flowmeter, 10 ft. (3 m) mains cable with 6-50P plug, 14.5 ft. (4.5 m) gas hose with 'B' male connector, 10 ft. (3 m) return cable with clamp, simple shoulder strap, fitted wear parts in torch/feeder (for .030 in. wire) and instruction manual. We also include 11 lbs. of 70S-6 mild steel .030" in. wire so you can begin welding immediately.

Migmaster® 215 Pro/280 Pro

Compact strength and mobility.

1Phase DC CV

Compacts

- Equipped with V/A digital meter with hold feature
- Creep start – gradual feed of wire for ultimate starts
- Adjustable wire feed speed
- Adjustable burnback timer – gives correct stick-out
- Spot welding timer
- Outstanding welding characteristics – efficient, high-quality welding
- Wide current and voltage range – multi-purpose applications
- Spool gun on-demand
- Sturdy, galvanized metal casing with air filter (optional)

The Migmaster 215 Pro/280 Pro are sturdy and robust step-controlled welding power units. They are intended for medium (215 Pro) to heavy-duty (280 Pro) MIG/MAG welding with solid wires of steel, stainless steel, or aluminum, as well as cored-wires with or without shielding gas. ESAB's proven technology and software provide reliability and outstanding welding performance.

The units are made with a strong galvanized metal casing to withstand harsh environments. Large wheels and built-in wire feeder ensure these machines are practical and mobile solutions. The units are fan-cooled and equipped with thermal overload protection.

A wide current and voltage range, plus two inductance outlets (280 Pro) make it easy to optimize settings for a variety of filler materials and gases. Migmaster 215 Pro/280 Pro units are equipped with the potentiometers to set the wire feed speed, spot welding time, and burnback time adjustment. Furthermore, Migmaster machines are equipped with such functions as creep start and inching.

Compacts

Aristo™ Mig U5000i/U5000iw

Power Source

- Multiprocess equipment; MIG/MAG, pulse MIG, MMA, TIG, Pulse TIG and Carbon Arc Gouging.
- Reliable and smooth starts and ends supported by efficient Hot Start and crater fill functions
- Efficient Man Machine Communication by the user-friendly control panel U6 or U8 Pendant
- Wide range of pre-programmed synergic lines. U8 Pendant provides the facility to define and store customized synergic lines for any material or gas combinations
- Memory for 10 (U6) or 256 (U8 Pendant) welding parameters
- TrueArcVoltage System, measures the correct arc voltage value independent of the length of the connection cable, return cable or welding gun.
- Dust filter to handle tough and dirty environment and avoid grinding-dust and metal particles inside the chassis
- Aristo SuperPulse, the welding process with the ability to control the heat input (U8 Pendant).

Robust and powerful

The Aristo Mig U5000i is the ideal choice when it comes to efficient production or prefabrication of high alloyed materials with a very high demand on the welding performance.

This power source is compact and a sturdy piece of equipment with a chassis made of extruded aluminum sections: Alutech™. This is a robust material that withstands rough treatment.

The power source is based on inverter IGBT technology that provides reliable equipment with outstanding welding characteristics. The control and communication CAN-bus system means less cables, which in turn increases operational reliability.

Flexibility

The power source is optimized to operate together with the wire feeders Aristo Feed 3004 and Feed 4804. Connection cables up to 115 ft. (35 m) provides a working radius of up to 115 ft. (35 m) to suit all your individual welding needs.

The TrueArcVoltage System guarantees that you weld with the correct arc voltage independent of any voltage drop in the welding cables. This means that you will get the same arc voltage and weld result whether you have a set-up with short connection cable and 3 m gun or a set-up with 35 meters working radius.

Origo™ Mig 320/410

with Origo Feed 304 M12

- WFS range 31-1000 ipm
- 2/4 stroke – simplifies welding
- Adjustable burn-back timer – gives correct stick-out
- Creep start – gradual feed of wire for ultimate starts
- Quick connectors – shortest possible setup times
- Multiple mounting options – counterbalance and mast, wheel kit, or hanging bracket
- Inch/gas purge (optional)

Powerful and flexible.

The Origo MIG 320/410 are step-switched power sources for medium (320) to heavy-duty (410) MIG/MAG welding. The machines are made with a strong galvanized metal casing to withstand harsh environments. Its large wheels, sturdy lifting eyelets, and an undercarriage designed for forklift transport make the Origo MIG machine easy to move. The wide current and voltage make it easy to optimize settings for a wide variety of filler metals and gases.

The machines are optimized to operate together with the Origo Feed 304 M12 wire feeder. Electronically controlled feeding gives an accurate and stable arc. The feeders are available with 1.8 in. diameter (30 mm) feed rollers for wires up to .062 in. diameter (1.6 mm).

The wire feed unit sits on a swivel post mounted on the top of the Origo MIG 320/410, providing a 360-degree radius of operation. The feeder mechanism is easy to access, and all wear parts can easily be exchanged. A single pressure device makes it easy to adjust the appropriate feeding pressure. All electronic components are protected in a separate compartment.

Origo™ Mig 320/410

with Origo Feed 304 M12

- Outstanding welding characteristics – high-efficient and quality welds
- Sturdy galvanized metal casing with air filter (optional)
- Wide current and voltage range – for multiple applications
- Selectable inductance taps – both have 2 taps
- Easy change of polarity – all types of cored wire
- Digital meter – provides an accurate reading of the set welding parameters and will hold its display even after welding has finished
- Idle mode – power and noise efficient; cooling fan works only when needed
- Undercarriage standard

MobileFeed 300AVS

Wire Feeder

- Arc voltage feeder for use with DC, CC or CV power supplies with straight (DC-) or reverse (DC+) polarity operation - no switches to set
- Ideal for harsh environments such as pipe lines, shipyards, offshore, general fabrication and more
- For use with 8 or 12 in. wire spools for enhanced portability, smaller size and reduced weight
- Enclosed, super impact-resistant case protects against dirt, metal grit, and moisture as well as extreme abuse, from grinding sparks, corrosive chemicals, drops and more
- 'CC' Euro torch connection for fast setup - no external gas hose or trigger wire
- Heavy duty 4 roll feed unit with PWM drive provides powerful, dependable wire feeding with Automatic slow wire run-in and Electronic Dynamic Braking for overall improved operation
- Safety features include insulated case, secondary contactor, low voltage torch trigger circuit and overload protection
- Designed to meet the most rigid standards.
Meets IEC-974-1 specifications.

Ordering Information

Each MobileFeed wire feeder includes gas solenoid, contactor, and dual groove feed rolls.

Wire
Feeders

Origo™ Feed 304 M13u Wire Feeder

3Phase DC CV 3 YEAR 100% SATISFACTION GUARANTEE

- Remote voltage control, allows local setting of power source voltage output
- Wire feed speed, accurate graduated dial shows settings in 50 ipm (1 m/min.) increments
- Adjustable burn-back time to correct stick-out and reduce wear of contact tips
- 2/4 stroke, helps minimize operator fatigue by optionally selecting trigger lock in the 4 stroke mode
- Inching/Gas Purge - Inching eliminates unsafe trigger pulls to load wire. Gas Purge ensures a clean start with pure shield gas
- Creep start - simplifies start/stop and gradual feed of wire to optimize the starts.
- Quick connectors - shortest possible set-up times. No tools required to change feed rolls, connect gas hose, weld cable or control cable.

With its galvanized metal casing, the ESAB Origo Feed is ideal for use in tough environments. Electronically controlled feeding gives accurate and stable arc. The four wheel roll feeder mechanism with grooves in both feed roll and pressure roll gives stable feeding and low wear on the wire - to avoid operational disturbance.

The feeders are available with either 1.18 in. (30 mm) rolls for wires from .023 in. (0.6 mm) up to 5/64 in. (2.0 mm). All operating adjustments are made on the front panel of the feeder, giving a good overview of the settings.

The front panel of the M13u is equipped with switches for inching/gas purge, 2/4 stroke and creep start. A wire feed speed knob with accurate graduated dial and adjustable burn-back are included. A remote voltage control is provided with 10 graduations from min. to max. settings. The panel is easy to operate with accurate setting that suits different needs and demands.

Extra versatility can be provided by utilizing one of the following mounting options for the Origo™ Feed. Counterbalance & Mast, Wheel Kit or Hanging Bracket.

Origo™ Feed 3004 MA23

with Mig 4002c/6502c Power Supply

3Phase DC CVCC 

- Quick connectors – reduces setup times
- Meets IEC 60974-5 safety standard with low voltage (42 VAC) operations and overload protection circuit to help eliminate breakdowns
- TrueArcVoltage™ System – measures the correct arc voltage value independent of the length of the connection cable or welding torch
- Can be equipped with a counterbalance device, lifting eye, or wheel kit for increased mobility
- Burnback
- Continuous adjustable inductor

Optimum welding solutions for easy setup and operation in GMAW/FCAW/SMAW.

With its galvanized metal casing, the ESAB Origo Feed 3004 is ideal for use in tough environments. Electronically controlled feeding gives accurate and stable arc. The four-wheel roller feeder mechanism with grooves in both feed roll and pressure roll gives stable feeding and low wear on the wire – to avoid operational disturbances.

The feeder has rolls with a diameter of 1.18 in. (30 mm) for wires up to .062 in. (1.6 mm) diameter. All adjustments are made on the man-machine communication panels (MMC) of the feeder, giving a good overview of the settings.

With the Origo Feed 3004, you have your choice of power sources. The MIG 4002c and 6502c switching converter (chopper) power sources are all intended for heavy-duty applications. The units are easily transported, and the digital (CANbus) communications and control system reduces the need for cables.

- Meets IEC 60974-5 safety standard with low voltage (42 VAC) operations and overload protection circuit to help eliminate breakdowns
- TrueArcVoltage™ System – measures the correct arc voltage value independent of the length of the connection cable or welding torch
- Can be equipped with a counterbalance device, lifting eye, or wheel kit for increased mobility
- Burnback
- Continuous adjustable inductor

Optimum welding solutions for easy setup and operation in GMAW/FCAW/SMAW/GTAW.

With its galvanized metal casing, the ESAB Aristo Feed 3004 is ideal for use in tough environments. Electronically controlled feeding gives accurate and stable arc. The four-wheel roller feeder mechanism with grooves in both feed roll and pressure roll gives stable feeding and low wear on the wire – to avoid operational disturbances.

The feeder has rolls with a diameter of 1.18 in. (30 mm) for wires up to .062 in. (1.6 mm) diameter. All adjustments are made on the man-machine communication panels (MMC) of the feeder, giving a good overview of the settings. The U6 MMC also features QSet,™ which automatically selects the correct parameters for your required wire/gas combination.

With the Aristo Feed 3004, you have your choice of power sources. The MIG 4002c and 6502c switching converter (chopper) power sources are all intended for heavy-duty applications. The units are easily transported, and the digital (CANbus) communications and control system reduces the need for cables.

Wire
Feeders

Aristo™ SuperPulse™

3Phase DC CV  

- Makes positional welding easier
- Allows welding with low heat input
- Provides uniform penetration
- Allows operator more control over welding speed
- TIG-looking weld appearance with MIG
- Very adaptable to all kind of mechanization, for example, Railtrac and Miggytrac
- Extends working range with larger wire size
- Less sensitive to joint gap variations
- Less sensitive to unequal heat transfer

If your application demands efficient root runs or positional welding on thin, or thick aluminum or stainless materials, then SuperPulse will provide the optimum solution. With productivity as the objective, today's TIG process is tomorrow's Aristo SuperPulse.

The prime advantage of the pulse/pulse process is the ability to control the heat input. Pulse/pulse is a well established process and has mainly been focused on aluminum welding.

Now SuperPulse is a further development of the pulse/pulse concept with the following additional combinations:

Pulse/short arc—Replace the TIG process by welding the root pass with the pulse/short-arc process. This process enables full control of the heat input for any thin sheet welding.

Spray arc/pulse—A very efficient process in positional welding of thicker materials. Aluminum can be welded straight upwards without the usual torch manipulation. (Less tiring for the operator)

MIG brazing of very thin sheets is another application where we recommend Aristo SuperPulse.

New welding processes will always require expert advice and training. To find out more about the process or applications surrounding Aristo SuperPulse please contact your local ESAB sales office for further information.

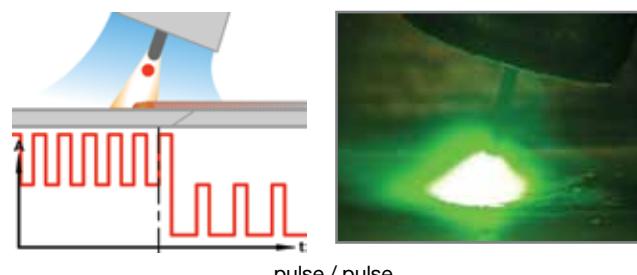

ESAB has welding process centers located in Hanover (US), Florence (US), Gothenburg (SE), Solingen (DE), Utrecht (NL), Waltham Cross (GB), Milan (IT) and Vamberk (CZ). All are prepared to undertake application trials for you, or offer a complete application/training package.

A complete package consists of:

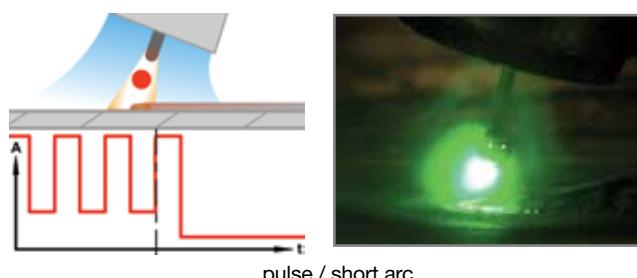

Aristo Mig or Origo Mig power source
 Aristo Feed 3004 wire feeder with U8₂ pendant
 MIG welding torch

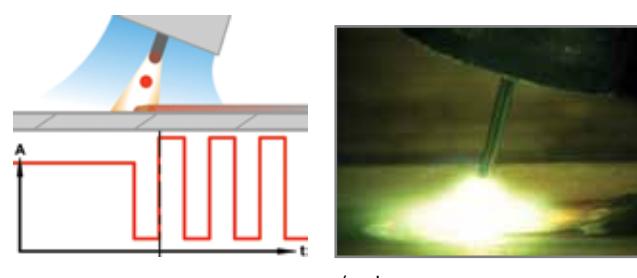

Wire Feeders

pulse / pulse

pulse / short arc

spray / pulse

Balanced Boom Assembly

- Extended a 12 or 15 ft. torch's reach from a 20 ft. radius up to a 31 ft. radius
- 350 degree envelope of operation in most uses
- Boom adjusts from 50 degrees up to 6 degrees down from horizontal position, can be used for tall weldments
- Fully balances feeder weight for fingertip control of feeder height, no lever jacking
- Mast has 6 ft. 10 in. clearance from floor to boom support pin
- Standard mounting directly to concrete floor
- Pallet and cart mounting options available
- Extremely rugged steel construction for years of continuous use
- Weld parameters easily adjustable on the standard feeder at the end of boom
- Wire spools mountable to mast or feed wire from Marathon Pac

Gas Spud (Surge Reducer)19X76

Install Gas Spud between gas solenoid inlet and gas hose coming from flowmeter. Flowrate will be limited to approx. 35 to 45 cfh on a 50 psig regulator/flowmeter and 30-35 cfh on a 25 psig regulator/flowmeter.

Note: This Gas Spud cannot be used on wire feeders having a direct crimped or clamped hose connection to the solenoid. Only hose connections having a standard 5/8 in. 'B' hose nut fitting can be used.

Counterbalance

Mini-Boom

- Up to 25 ft. working radius—effective area of over 1900 sq. ft.
- 350 degree working envelope
- Mounts easily to power source, inverter cart or stationary pedestal
- Lowest cost boom on the market
- Adjustable boom length
- Adjustable counter-balance spring

* ST-21M requires bracket (P/N 633885) and adaptor (P/N 61N59) for use with the above conduits when mounting away from feeder. Refer to torch manuals for specific accessories required to install on wire feeder (available online at www.esabna.com)

Mig Spool Gun Packages

ST-23A Spool Gun

- Rugged 250 Amp, 100% duty cycle performance
- Service lines enter the rear of gun instead of handle for improved balance and accessibility
- Inching pushbutton mounted on bottom of handle
- 30 ft. service lines

ST-23A

- Designed for use with Migmaster Compacts
- Weighs less than 3 lbs.
- Uses durable contact tips and nozzles
- Powerful gear motor in handle pulls welding wire from 4 in. diameter spool in the molded gun case
- Partial depression of the torch trigger controls gas pre- and post-flow operations - full depression provides wire feeding as well as gas flow
- Wire feed control mounted on gun provides precise adjustment of wire feed rate at torch

Mig Spool Gun Packages

MT-250 SG

- Designed for use with the Migmaster Compacts
- Weighs less than 3 lbs.
- Uses durable MT contact tips and nozzles
- Powerful gear motor in handle pulls welding wire from 4 in. diameter spool in the molded gun case
- Partial depression of the torch trigger controls gas pre- and post-flow operations - full depression provides wire feeding as well as gas flow
- Wire feed control mounted on gun provides precise adjustment of wire feed rate at torch

MT-250 SG Spool Gun

- Medium-duty 200 Amp, 100% duty performance
- Spool holder adjusts to balance in the operator's hand
- 25 ft. service lines

Ordering Information

MT-250 SG Spool Gun - Includes three 3/64 in. contact tips, drive roll, liner, control cable, gas hose and #10 nozzle and 25 ft. service lines36779

Mig Gun PP36 Plus

MIG/MAG Torch with wire feed speed control

- Improved 42 VDC motor for more torque and constant, trouble-free feeding
- Improved drive-roll system for soft or difficult wires
- Improved gas seal for long distance arc shielding
- Air cooled 300A CO₂, 280A mixed gases, 60% duty cycle
- Optimum torch cooling – high endurance
- Time-saving torch neck replacement utilizes central plug system
- Robust construction for durability and extended torch life
- 3-piece combined cable assembly for better flexibility – especially for long distances
- Options available to use with most ESAB 42 VDC wire feeding systems with wire feed speed control at torch
- Optional 9" extended 180° and 45° swiveling necks for hard to reach joints

Origo™ Arc 410c/650c

Heavy Duty MMA/TIG/CAC-A

- Best for cellulosic electrodes
- Outstanding welding characteristics – efficient and high-quality welding
- Wide current and voltage range – multi-purpose applications
- Mains voltage compensation – stable welding controls
- Stepless current control – exact settings with optional remote control
- Hot start, arc force, and anti-stick
- Digital V / A meter
- Optional wheel kit is available

The Origo Arc 410c and 650c are sturdy and robust switching converter (chopper) power sources intended for manual heavy-duty MMA welding with coated electrodes, TIG welding, and air carbon arc gouging. The machines are built with proven technology, so you can count on the highest level of reliability and outstanding welding performance. In addition, Origo Arc's strong metal housing makes for ideal use in harsh industrial environments.

Easy to use

The wide current range of the Origo Arc makes it easy to optimize settings – allowing the machine to be used with an extensive range of filler materials. These units are equipped with functions such as hot start, arc force, and anti-stick. It is also possible to adjust parameters during welding process.

Flexibility

The units have vertical static characteristics, which means that regardless of cable length and arc voltage, the current remains constant. The dynamic characteristics of the Origo Arc range ensure a stable, spatter-free arc, and an easily controlled molten pool.

Units shown with optional wheel kit.

High performance

Due to the high power factor, energy consumption is low, and installation costs can be kept to a minimum. The welding properties of the Origo Arc units are configured to meet the requirements of welding with cellulosic electrodes. The arc is very flexible when starting from the lowest currents. When the arc is shortened, arc force makes weld penetration easier – especially when the electrode is pressed against the welded material.

In control

The Origo Arc 410c and 650c are equipped with the A12 control panel. The A12 is a full-featured control panel with a V/A instrument and a receiver for wireless current setting. As an option, the Origo Arc range can be equipped with remote control. The units are switched off automatically in case of overheating.

MiniArc® 161LTS

Power Source

1Phase DC CC  100% SATISFACTION GUARANTEED

- The MiniArc 161 Automatic Primary Select operates on either 115 or 230 VAC and will automatically configure to the primary input supplied
- Fixed hot start - allows the operator to easily strike an arc without the electrode sticking to the plate
- Fixed arc force - allows the operator to get deeper penetration into the plate without the electrode sticking to the plate
- Lift arc tig gives you the luxury of lifting the tungsten as opposed to traditional scratch starting which can deposit tungsten into the plate resulting in contamination
- Able to use cellulosic 6010 electrodes with ease
- 18 Pound weight - Makes this unit portable and easy to carry directly to the job
- Comes with a shoulder strap
- Includes 10 ft. work cable with clamp, 10 ft. welding cable with electrode holder
- Thermal indicator prevents the machine from becoming damaged if airflow is blocked or from exceeding the duty cycle
- Simple interface - amperage knob, stick/TIG switch and on/off switch on front panel of unit
- Small and portable, inverter based
- 5 to 160 Amps current range for DC Welding

Caddy™ Arc 201i

Power Source

1Phase DC CC  100% SATISFACTION GUARANTEE

- Fifth generation Caddy™ features advanced inverter technology built in – deliver unparalleled performance in a rugged, portable package
- Adjustable hot start makes it easy to strike the electrode – avoids starting problems
- Adjustable arc force sets the intensity of the arc – improves weld quality
- ArcPlus™ II improves welding characteristics and simplifies work – produces better weld quality with less clean up
- Equipped with large OKC 50 cable connectors – for greater durability
- Features compact design with impact resistant polymer and aluminum casing – makes the unit lightweight and easy to carry
- Small size does not compromise vital cooling of internal components
- Large heat sinks and innovative design make this Caddy™ machine run cooler – promotes longer machine life even when used in harsh environments
- Designed to keep sensitive interior parts clean and dust free
- Built in accordance with IP23 for outdoor use, even in wet-weather conditions – makes this machine ideal for on-site work
- Equipped with a PFC (Power Factor Correction) circuit – allows the machine to perform a full range of functions on a 16 A fuse, protects against fluctuating mains voltage, and makes it safer to use with a generator
- Operates with extra long mains cables – expands working radius

Control Panel

The advanced Caddy™ A33 features a digital display panel with hot-start and arc force control for fine tuning, MMA or TIG selection, LiveTig™ start, two memory settings and remote control.

MMA and ArcPlus™ II

Caddy™ Arc supplies direct current and allows you to weld most metals including alloy and non alloy steel, stainless steel and cast iron. The Caddy™ Arc 201i welds electrodes up to 5/32" diameter.

TIG Welding

To TIG weld with the Caddy™ Arc, all you need is a TIG torch with a gas valve, gas regulator and cylinder of gas. The Caddy™ A33 control panel provides Live Tig™ start for electronic control of the start current. You can weld mild steel or stainless steel with or without filler material.

TIG torch Remote 25 ft.*

* Remotes for use with A33 models only.

Specifications

Caddy™ Arc 201i	
Input Voltage	230/1ph 50/60 Hz
Fuse (slow), A	16
Recommended generator size, kVA	12
Permitted load at 104°F (40°C), MMA	
25% duty cycle, A/V	170/26.8
60% duty cycle, A/V	130/25.2
100% duty cycle A/V	110/24.4
Permitted load at 104°F (40°C), TIG	
25% duty cycle, A/V	220/18.8
60% duty cycle, A/V	150/16.0
100% duty cycle A/V	140/15.6
Setting range MMA (A33), A	4-170
Setting range TIG (A33), A	3-220
Open circuit voltage (A33), V	72
Power factor at max. current	0.99
Efficiency at max. current	81
Dimensions LxWxH	16.46 x 7.40 x 8.19 in. (418 x 188 x 208 mm)
Weight	18.30 lbs (8.3 kg)
Enclosure class	IP 23

Caddy™ Tig 2200i

Power Source

1 Phase DC CC  100% SATISFACTION GUARANTEE

- Fifth generation Caddy machines feature advanced inverter technology built in – deliver unparalleled performance in a rugged, portable package
- Designed for quality TIG welding with a variety of metals
- Extremely easy to use – all welding parameters displayed in an easy-to-understand format
- ESAB 2-Program function (TA34) – allows pre-programming and program changes during welding
- Pulsed TIG feature (TA34) – for greater control of heat input and weld pool
- Micro Pulse (TA34) – minimizes area affected by heat, particularly when working with thin metals
- ArcPlus™ II (TA34) improves welding characteristics and simplifies work – produces better weld quality with less clean up
- Hot start and Arc force settings (with TA34) – create true MMA welding characteristics
- Equipped with large OKC 50 cable connectors – for greater durability
- Compact design with impact resistant polymer and aluminum casing – makes unit lightweight and easy to carry
- Small size does not compromise vital cooling of internal components
- Large heat sinks and innovative design make these Caddy machines run cooler – promotes longer machine life even when used in harsh environments
- Designed to keep sensitive interior parts clean and dust free
- Built in accordance with IP23 for outdoor use, even in wet-weather conditions – makes machine ideal for on-site work
- Equipped with a PFC (Power Factor Correction) circuit – allows the machine to perform a full range of functions on a 16 A fuse, protects against fluctuating input voltage, and makes it safer to use with a generator

Control Panels

Two control panel options are available – both with all functions required for TIG (DC), with HF-start or LiftArc™, and MMA welding. The Caddy™ Tig TA34 features an advanced control panel with Pulsed TIG, which provides better control of the heat input, and Micro Pulse, which allows pulse time settings down 0.001 seconds.

The TA34 panel also includes dual memory settings, switchable from the panel or torch trigger, and the capacity to set slope up/down and post-gas.

The control panel of the Caddy™ Tig TA33 simplifies TIG welding. All you do is set the plate thickness, and the machine does the rest, making it easy to produce quality TIG welds. Welding current, slope down and post-gas can be manually controlled.

MMA with ArcPlus™ II

Caddy™ Tig supplies direct current and allows you to weld most metals including alloy and non alloy steel, stainless steel and cast iron. The Caddy™ Tig 2200i welds electrodes up to 5/32" diameter.

Caddy™ Tig 2200i

Caddy™ Tig 2200i AC/DC Power Source

1Phase DC CC  100% SATISFACTION GUARANTEE

- Unparalleled performance in a mobile machine for a wide range of TIG and Stick welding applications
- Designed for quality TIG welding with all types of metals
- Extremely easy to use – all welding parameters displayed in an easy-to-understand format
- Innovative QWave™ feature – enables AC welding with exceptional arc stability and low noise
- AC frequency and balance control – optimizes weld pool
- Electrode preheating – facilitates excellent starts and extends electrode life
- ESAB 2-Program function – allows pre-programming and program changes during welding
- DC Pulsed TIG welding – for easy control of heat input and weld pool
- DC Micro Pulse – minimizes area affected by heat, particularly when working with thin metals
- Hot start, Arc force and polarity switch (DC) – create true MMA (Stick) characteristics in AC and DC mode
- Equipped with large OKC 50 cable connectors – for greater durability
- Features compact design with impact resistant polymer and aluminum casing – makes the unit lightweight and easy to carry
- Small size does not compromise vital cooling of internal components
- Large heat sinks and innovative design make these Caddy™ machines run cooler – promotes longer machine life even when used in harsh environments
- Designed to keep sensitive interior parts clean and dust free
- Built in accordance with IP23 for outdoor use, even in wet-weather conditions – makes this machine ideal for on-site work
- Equipped with a PFC (Power Factor Correction) circuit – allows the machine to perform a full range of functions on a 16 A fuse, protects against fluctuating input voltage, and makes it safer to use with a generator

Control Panel

The Caddy™ Tig TA34 AC/DC features an advanced control panel with Pulse TIG, AC Balance to control arc cleaning and penetration, AC Frequency to control arc width, and a special setting to control electrode preheating for better starts with a variety of electrodes.

TXH™ Air/Water Cooled Torches

- Ergonomic design, user friendly controls at fingertip
- Rugged construction - trouble-free operation with low maintenance
- Flexible heads offer un limited versatility for hard to reach applications (TXH 120F, 150F, 200F and 250F only)
- Effective cooling system
- For use with Caddy Tig and Caddy Arc machines with OKC connectors
- Remote control models available

Hard Body Torches with HFC™ (High temperature Fiber reinforced Composite material) provide the best performance, heat resistance, abrasion resistance, and high frequency resistance.

Rubber bodies provide improved resistance to breakage in rough duty.

ESAB has made a model change on the HW-9 series torches. The new designation for that series of torches is HW-90.

ESAB has made a model change on the HW-20A series torches. The new designation for that series of torches is HW-9.

*Note: Order wrench (53N20) for HW-24 collet body.

HW-90 Torch Family - 120 Amp Gas-Cooled Torches

- HW-90 is designed for small, confined areas where accessibility is the primary concern
- High flexibility one-piece cable
- Available in 60/120 degree heads by exchanging cap and cup. Also available in Pencil style (180 degree)
- Excellent visibility
- Gas lens available for improved shielding

Specifications

	HW-90	
Gun Capacity	110 A, 100% duty cycle ac or dc with standard accessories	
	110 A, 100% duty cycle ac or dc with gas lens accessories	
	120 A, 50% duty cycle ac or dc	
Dimensions	60°	Pencil
Length	6 3/4 in. (171 mm)	7 1/8 in. (181 mm)
Length of Head		
Short Cap	3 1/8 in. (79 mm)	1 1/16 in. (27 mm)
Long Cap	7 1/8 in. (181 mm)	
Diameter of Head	19/32 in. (15 mm)	5/8 in. (16 mm)
Head Angle	60/120°	180°
Handle Diameter	3/4 in. (19 mm)	3/4 in. (19 mm)
Weight (less service lines)	3 oz. (84 gm)	5 oz. (140 gm)

HW-9 Torch Family - 140 Amp Gas-Cooled Torches

- Compact body provides greater access to weld in confined or restricted areas
- Hard body provides superior heat and abrasion resistance for longest life
- Silicon rubber body provides improved resistance to breakage in rough duty
- Flexible head models provide added versatility for reaching hard-to-get-at applications

16	98W43	Hose Clamp
	11N16	Water Adaptor (5/8 LH to 1/4 NPT) (not shown)

HW-25 Torch Family - 200 Amp

Water-Cooled Torches

- Small, Lightweight
- Flexible head to access difficult joints

Specifications

	HW-25
Gun Capacity	200 A, 100% duty cycle, ac or dc with std. accessories
	210 A, 50% duty cycle, ac or dc with std. or gas lens
Dimensions	
Length	10 1/2 in. (267 mm)
Length of Head	4 7/8 in. (124 mm)
Diameter of Head	5/8 in. (19 mm)
Head Angle	Flexible
Handle Diameter	5/8 in. (19 mm)
Weight (less service lines)	14 oz. (400 gm)
Cooling Requirements	1 qt. min. (0.94 l/min)

Genuine Heliarc Accessories

Gas Lens

To meet increasingly stringent weld quality standards, we developed the patented GENUINE HELIARC Gas Lens. This stack of concentric, fine-mesh stainless steel screens produces an exceptionally stable stream of shielding gas (see Figure 1). By forcing the gas into a coherent stream, an effective shielding pattern can be projected greater distances (see Figure 2). Welding is possible at nozzle distances up to one inch from the plate

surface, allowing greater welder visibility and access to tight joints.

Extending the electrode from the gas cup also increases the current capacity of some torch models. For example, a gas lens increases the 100 percent duty rating of our popular Heliarc HW-18 torch from 300 to 375 A.

Patented Genuine Heliarc Gas Lens

Accessories

Ceramic Cups

Made from Grade "A" lava materials are less impact and heat resistant than the high-impact cups, but can be expected to give very good service and long life. They perform very well in confined areas where excessive heat

is reflected back into the nozzle. These cups can be used at currents up to 250 A dcsp or ac, depending on arc time and cup size.

General Accessories

FC-5C Foot Control

FC-5B EHD

Remote Controls

- For use on 350mpi, SVI 450i, 353cv*, 453cv*, 453cc*, 553cc*, MP 460, 653cvcc*, Heliarc 252 and Heliarc 352

HC-3B Hand Pendant Control

30 ft. (9.1m) cable. Provides remote control of process switch (cv/cc), contactor switch (on/off) and output control (cc-amps/cv-volts) 33838

TC-2B Torch Control

25 ft. (7.5 m) cable. Attach to torch handle. Provides remote current control and contactor (on/off) control 33839

TC-3A Remote Torch Switch

30 ft. (9.1 m) cable. Provides on/off contactor control. Includes push button switch and rubber boot to secure switch to torch handle.

HW-9, 17, 20, 20A / 24 35783

HW-18 / 26R 36680

FC-5C Foot Control

30 ft. (9.1 m) cable. Provides remote current control and contactor (on/off) control 0558004234

FC-5B EHD Foot Control

30 ft. (9.1 m) cable. Extra Heavy Duty foot control provides remote current control and contactor (on/off) control 33841

* Requires remote control kit 0558001436

Truck Kits and Carts

- Allows for easy mobility of equipment

TR-29 (two cylinder) for ESAB 353cv, 453cv, MP 460, 453cc, 553cc and 653cvcc, Heliarc 252, Heliarc 352..... 37924

TR-23A (two cylinder) for Heliarc 252 and Heliarc 352..... 36224

Inverter Cart, (two cylinder) for use with MTS-3500i..... 31700

R-33 Regulator / Flowmeter

- Regulator with Lexan flow tube, 3000 psi cylinder gauge

R-33-FM-580* - Argon/Argon mixes, 10-50 cfh flow 21557

R-33-RM-580HB* - Argon/Argon mixes, 10-50 cfh flow, for gas hses needing a "B" fitting added 0558005172

R-33-FM-320* - CO₂, 10-65 cfh flow 21558

*Refer to Gas section for details

Hoses/Fittings

Gas Hose Assemblies

3 ft. (0.9 m) 31504

6 ft. (1.8 m) 31503

12 ½ ft. (3.8 m) 40V77

25 ft. (7.5 m) 34V38

12 ½ ft. (3.8 m) heavy duty (CO₂) 19416

25 ft. (7.5 m) heavy duty (CO₂) 19415

Gas Hose Coupler 11N17

Gas Hose Coupler, "Y" 950356

Water Hose Assemblies

3 ft. (0.8 m) 20634

6 ft. (1.8 m) 20633

12 ½ ft. (3.8 m) 40V76

25 ft. (7.5 m) 406196

Water Hose Coupler 11N18

1 Gallon Torch Coolant 156F05

Twist Lock Connectors

- For use on MTS-3500i, Heliarc 252, Heliarc 352, Heliarc 161 AC/DC, Migmaster 275, CaddyArc 151i, CaddyArc 201i, CaddyTig 2200i, CaddyTig 2200i AC/DC, MultiMaster 160 / 260, MultiMaster 300, Origo Mig 4002c/5002c/6502c, Aristo 5000i, U5000i, Origo Mig 320/410/510, Origo Arc 410c/650c.

50 mm Connectors

Quick-acting twist lock connectors for attaching output power cables or torches to power source:

Male for 1/0 to 4/0 cable 13792513

Female for 1/0 to 4/0 cable 13735631

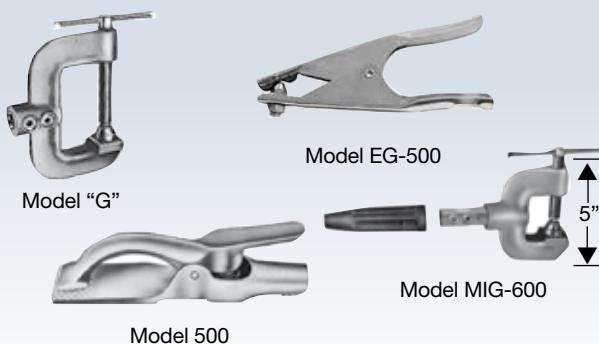

Male for #2 AWG to 1/0 cable 13733936

Female for #2 AWG to 1/0 cable 13735632

Quick connector with 1/2 in. threaded stud 13735501

Tee connector (1 male, 2 female) 13792804

General Accessories

Ground Clamps

■ ESAB Ground clamps provide the largest workpiece-contact area of any clamp on the market. They assure positive connections and slide easily under steel plate. Ground clamps help eliminate arc blow, make it easy to change ground location, and assure proper voltage for maximum weld results with all rods.

Model	Part Number	Amp Capacity	Type Cable Connection	Weight
200	81F11	200	Mechanical Oval-Point Screw	13 oz.
300	81F12	300	Mechanical Oval-Point Screw	26 oz.
500	81F13	500	Mechanical Oval-Point Screw	35 oz.
MIG-600	0160288001	600	Two Oval-Point Screws	56 oz.
G	82F17	600	Two Oval-Point Screws	52 oz.
EG-500	82F32	500	Bolt and Nut with Support	22 oz.
EG-300	82F31	300	Bolt and Nut with Support	11 oz.

Work/Electrode Holder Cable Assemblies

Includes twist lock 25mm QC plug
10 ft. Cable Kit, electrode/work cable assemblies, 150A.....0349501078
10 ft. Electrode holder cable assembly, 150A.....0349501079

Includes twist lock 50mm QC plug
10 ft. Work cable*, #3AWG.....0700006901
15 ft. Work cable*, 2/0AWG.....36253
15 ft. Work cable*, 2/0AWG.....35881
15 ft. Electrode holder 2/0AWG.....21226

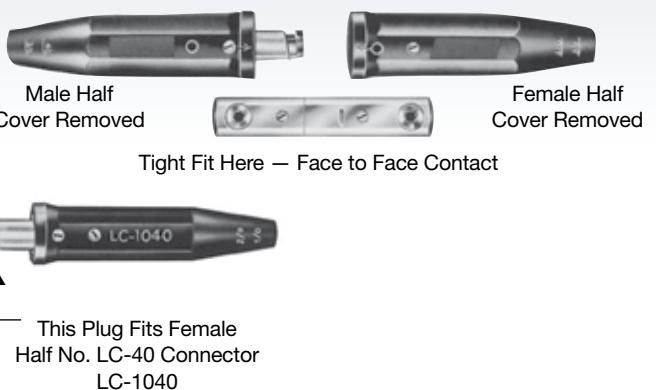

Includes 1/2" ring lug
15 ft. Work cable*, 2/0AWG.....0558001440
* work cables include work clamp

Feeder Cable Assemblies

1/2" Ring lug to 1/2" Ring lug
15 ft. Feeder cable, 2/0AWG 0558001441
1/2" Ring lug to 50mm QC
15 ft. Feeder cable, 2/0AWG 36254

Cam Type Action Here
Makes Positive Stop/Lock

Female Brass Connector Is
Recessed - No Accidental Short

Cable Connectors

■ ESAB Cable Connectors offers many advantages over older styles. Metal parts are precision machined from heavy, specially shaped brass extrusion. Cam action design of male half connector pulls the two halves tightly together. Connector covers are molded from a special heat and cold resistant material. Covers have no metal liner to rust or corrode. Easily installed with a 1/4 in. Allen wrench.

Model	Part Number	Cable Connection	Cable Capacity	Weight	Std Pack
LC-40	81F25	Oval-Point Screw Mech.	1/0 thru 3/0	17 oz.	1
Same connector style as above - only one half of the set					
LC-40	81F26	Male half	1/0 thru 3/0		
LC-40	81F27	Female half	1/0 thru 3/0		

Electrode Holder

■ Curved upper lever with low angle design for better hold. Firm electrode grip, fully insulated, high strength spring. High leverage tong designed for easy opening. Heavy-duty shockproof handle.

Part Number	Amp Capacity	Electrode Capacity	Cable Capacity	Length	Weight
81F02	300	Up to 7/8 in.	2/0	10 in.	20 oz.
0558008634	500	Up to 3/4 in.	4/0	11 in.	26 oz.

Inside every great **welder** is a **warrior**.

Introducing Weld Warrior™ personal protection equipment. Because you don't just finish the job – you conquer it. Order the catalog (PPE-1010) to check out the entire line of gear or visit us online at esabna.com/weldwarrior today.

ESAB Welding & Cutting Products / esabna.com / 1.800.ESAB.123

Unrivaled service and support.

Every ESAB product is backed by our commitment to superior customer service and support. Our skilled customer service department is prepared to quickly answer any questions, address problems, and help with maintenance and upgrading of your equipment. Our products are backed with the most comprehensive warranty in the business.

With ESAB, you can be sure that you have purchased equipment that will meet your needs today and in the future. Product and process training is also available. Ask your ESAB sales representative or distributor for a complete ESAB solution.

NOTICE:

Test results described above were obtained under controlled laboratory conditions, and are not guarantees for use in the field. Actual use of the product may produce varying results due to conditions and welding techniques over which ESAB has no control, including but not limited to plate chemistry, weldment design, fabrication methods, wire size, welding procedure, service requirements and the environment. The User should confirm by qualification testing, or other appropriate means, the suitability of any welding consumable and procedure before use in the intended application.

CAUTION:

Users should be thoroughly familiar with the safety precautions referenced in the product label for the relevant product and the Safety Data Sheet for the product. Safety Data Sheets are available at www.esabna.com or by calling 1-800-ESAB-123.
