

SOURCE ATLANTIC

A screenshot of the TESSALINK software interface, showing a table of equipment data. The table has columns for 'Asset Number', 'Asset Name', 'Total Count', 'Asset Status', 'Serial Number', and 'Storage Location'. The data is organized into rows, with some rows highlighted in green and others in red. The interface also includes a search bar and a 'What are you looking for?' prompt.

ASSET MANAGEMENT

Inspection, Repair, and Recertification Services

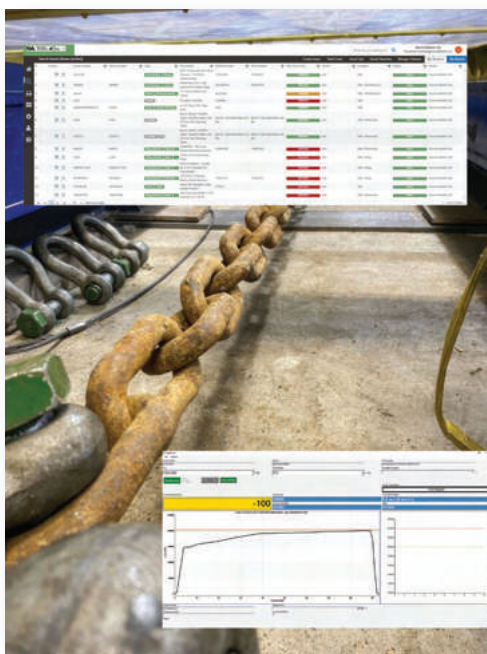

Let Us Track and Manage Your Field Assets for Safety and Compliance

With our RFID asset management solution we can efficiently manage the certification, tracking and inspection of industrial field assets throughout their lifecycle. Our innovative safety tracking solution helps our customers reduce costs and liability, as well as enhance safety and peace of mind.

Demonstrate Your Commitment to Equipment Safety and Audit Readiness Through Our Cloud-Based Asset Management and Recertification Service

To get you started, our service team will perform an on-site or in-shop inspection of existing assets for safety and compliance. Assets will be RFID tagged or serialized to be tracked through our management software, Tesselink. We can digitally store detailed information including item attributes, test data, forms, pictures, material certs, repair information and more.

The compiled asset record creates a complete digital certification that is stored online for future reference! Items will be proactively scheduled for future inspection and recertification. Should an item fail to pass inspection/certification, our service team will provide repair services where applicable or, alternatively, provide a replacement solution.

We Do the Work For You – Schedule, Inspect, Repair, Recertify or Replace

The Source Atlantic service team will be proactively scheduled your assets for future inspection and recertification. We ensure that your assets meet or exceed OSHA, ASME, ANSI, CSA and local regulations. Should items fail to pass safety standards, our service team, where possible, will provide repair service. Alternatively, we will provide a replacement solution.

Benefits of participating in Source Atlantic's asset management service is that your equipment is ready for use when needed, repaired or replaced before it breaks, ready for compliance audits, and you are providing a safer work environment by practicing sustainable safety processes.

Asset ID	Asset Name	Location	Status	Inspection Due Date	Recertification Due Date	Replacement Due Date	Notes
101	Hoist 1	Warehouse A	Good	2023-12-15	2024-06-15	2025-06-15	Regular inspection passed
102	Hoist 2	Warehouse B	Good	2023-12-15	2024-06-15	2025-06-15	Regular inspection passed
